FULL STACK WEB DEVELOPER - APR. 2017 – JUN. 2019
FREELANCE – Valencia, Venezuela

Creation of web portals based on the needs of clients, applying some organic positioning techniques, for all types of services and sales. Adaptive designs (responsive) for different formats. Development using different technologies for every project

- PHP/Laravel
- Angular 6+
- Vue.js
- Wordpress
- MySQL

WEB MASTER - JAN. 2017 – APR. 2017
AGENCIA MULTIMEDIA – Valencia, Venezuela

Development of websites with Wordpress CMS

INTERNSHIPS

PROGRAMMER ANALYST- AUG. 2018 – NOV. 2018
FEBECA – Valencia, Venezuela

Degree Thesis: This research work consists of a platform that helps companies to automate the process of continuous training of staff through a mobile application on mobile devices with Android, using a strategy technique called microformation. The platform allows the personnel in charge to upload content such as: video tutorials, infographics and documents, in addition to opting to restrict the content at a specific time. The platform also has a module to generate reports, these reports consult relevant data of the interaction of users with the mobile application and its different elements. These reports can be viewed by a person in charge of analyzing and documenting these reports. Starting from the Action Research methodology, in the action phase for the development of this project, the guidelines of the software development methodology known as Agile Unified Process (AUP) were executed. The necessary results were obtained to meet the established objectives.
